

## **Thompson Industries Expands Capacity**

Hawthorne, CA—February 27, 2009—Thompson Industries, Inc., part of TSI Group, Inc., announced the delivery of two new Fadal vertical machining centers (VMC), bringing their total number of VMCs to eight. VMC's are used in manufacturing to machine parts based on computer-aided-design software.

Thompson Industries' eight machines are all Fadal VCM 6030 HT models. The 60"x30" travel allows more parts per setup and greater flexibility when manufacturing large products. Also, all machines are equipped with glass scales to meet today's close tolerance requirements.

Thompson Industries purchased the additional machines in response to customers' requests for additional machining capacity. Randy Delaney, president of Thompson Industries, says, "Answering our customers' needs quickly and precisely contributes to the continued success of Thompson Industries. Any investment that makes us a better partner to our customers is unquestionable."

### **About Thompson Industries:**

Thompson Industries is an industry leader in the manufacturing of heat exchangers, cold plates, aluminum vacuum furnace brazing, dip brazing, heat treating, fin forming, high speed machining and thermal analysis and testing. Visit us at: [www.tibrazing.com](http://www.tibrazing.com)
