

FOR IMMEDIATE RELEASE

## **Woven Electronics to Demonstrate Innovative LightLOC Perimeter Security System at ASIS Conference**

Simpsonville, SC, September 18, 2007 –Woven Electronics, LLC, a TSI Group company, will feature their expanded LightLOC<sup>®</sup> product line at the ASIS Conference and Exhibition in Las Vegas, NV, Sept. 24-26. Live demonstrations will be given of their sensing and monitoring capabilities that features their newest software package, LightLOC Network Monitoring Software Version 6.7.

LightLOC is a patented, fiber optic based security system providing the optimum in perimeter and access security with standard 25km long-range capabilities. The LightLOC product line is headlined by its Network Monitoring Software—an advanced, network capable, OTDR-based monitoring platform providing data analysis, alarm detection and notification, and system management. It supports the entire line of LightLOC sensors in a single package. The Network Monitoring Software is able to pinpoint the locations of intrusions within a few meters and characterize the types of intrusions by their signatures. In addition, it is easily adaptable to specific applications by supporting a customizable site map with colored indicators denoting sensor locations, types and statuses. System outputs may also include relays, e-mail and pager notifications, remote display stations and custom interfaces.

Along with the LightLOC<sup>®</sup> Network Monitoring Software, the LightLOC<sup>®</sup> Express Module, the newest addition to the LightLOC<sup>®</sup> product line, will also be on display. Express is basic fiber optic detection device, and is ideal for monitoring small perimeter systems where only relay output statuses are required.

Tom Browning, business development manager, states, “We are thrilled with this new software release. Our clients can deploy a security solution that can monitor manholes, grates and gates with total network level support for complete perimeter protection. This is what fully integrated software is all about.”

Currently, LightLOC is helping to secure DOD, DOE, and commercial facilities in the United States and Europe. The LightLOC product line consists of sensing solutions for manholes, gates, doors, culverts, enclosures, perimeter vehicle detection and denial, and secure communications as well as custom applications.

Woven Electronics ([www.wovenelectronics.com](http://www.wovenelectronics.com)), a TSI Group company, is the leading source for analog and digital custom-engineered, patented interconnect solutions including woven cable configurations, unique mechanical and electrical packaging, and precision fiber optic designs for mission-critical applications. Utilizing these skills sets enables Woven Electronics to safeguard the country’s borders, military installations and nuclear facilities with unwavering reliability.

TSI Group, Inc. ([www.tsigroupinc.com](http://www.tsigroupinc.com)) is a world-class supplier of high quality contract manufactured and custom engineered electronic assemblies and thermal management products, enclosures and interconnect solutions for military, commercial and security applications.
