

FOR IMMEDIATE RELEASE

Woven Electronics Announces LightLOC Express Security System

Simpsonville, SC, September 18, 2007 –Woven Electronics, LLC, a TSI Group company, is pleased to announce the latest product in their LightLOC® product line LightLOC Express.

LightLOC is a patented, fiber optic based security system providing the optimum in perimeter and access security with long range capabilities. LightLOC Express is the simplest of the monitoring devices offered with LightLOC systems. It is a modular, fiber optic intrusion detection device ideal for monitoring discrete sensors, small systems, or definable areas or zones. It is capable of monitoring the entire LightLOC family of products, is easily configurable in the field and immune to vibration. From up to 20km away, Express can immediately detect intrusions and differentiates between alarming sensors and broken fiber.

Express easily integrates with existing monitoring systems through relay outputs, affording security professionals the ability to operate LightLOC seamlessly with other notification systems. Local, remote, audio and light alarms are optional. Additionally, an on-board testing capability exists for alarm functionality.

EJ Mondor, president of Woven Electronics states, “LightLOC Express was designed to meet the needs of a smaller facility that does not require the same level of sophistication provided by the Network Level LightLOC system. It’s designed to provide the advantages of optical fiber to smaller sites in a cost-effective manner.”

Currently, LightLOC is helping to secure DOD, DOE, and commercial facilities in the United States and Europe. The LightLOC product line consists of sensing solutions for manholes, gates, doors, culverts, enclosures, perimeter vehicle detection and denial, and secure communications as well as custom applications.

Woven Electronics (www.wovenelectronics.com), a TSI Group company, is the leading source for analog and digital custom-engineered, patented interconnect solutions including woven cable configurations, unique mechanical and electrical packaging, and precision fiber optic designs for mission-critical applications. Utilizing these skills sets enables Woven Electronics to safeguard the country’s borders, military installations and nuclear facilities with unwavering reliability.

TSI Group, Inc. (www.tsigroupinc.com) is a world-class supplier of high quality contract manufactured and custom engineered electronic assemblies and thermal management products, enclosures and interconnect solutions for military, commercial and security applications.
